Resume

Full-Stack Developer with over 22 months of hands-on experience in Python/Django and the JavaScript/TypeScript ecosystem, with a track record of delivering AI-powered web and mobile applications, from prototyping to cloud deployment (AWS). Reduced the execution time of an ETL pipeline by 50% through parallelization and led the complete architecture (front-end, back-end, and database) of a monolithic application for the agricultural sector.

Works with agile methodologies (Scrum), CI/CD (GitHub Actions), Docker, and automated testing (TDD), utilizing AI agents as development pair-programming tools to accelerate deliveries without compromising code quality and security. Solid proficiency in PostgreSQL, Nginx, Celery/Redis, and integration via RESTful APIs.

Professional Experience

Systems Developer

Leds - IFES, Serra, Brazil

september 2024 – august 31, 2025

Development of a monolithic AI-powered web-mobile application for the agricultural sector.

- I developed the full stack of an AI-powered web-mobile application for the agricultural sector using Django, initially serving 2 concurrent farmers.
- I designed and implemented the complete solution (front-end, back-end, and PostgreSQL database), ensuring the implementation of more than 3 additional modules.
- I implemented a suite of automated tests and configured the deployment on AWS (EC2), later migrating it to a dedicated server, increasing test coverage to over 60% and reducing incidents in production.

Technologies and Tools: Python, Django, JavaScript, HTML5, CSS3, AWS (EC2), Docker, PostgreSQL, Git, Nginx, Celery, Redis.

Full-Stack Developer

Leds - IFES, Serra, Brazil

april/2026 – present

Development of a landing page for the ‘V Encontro Capiçaba de Física.’

- I implemented the front end in Astro/TypeScript based on a Figma prototype, deploying via GitHub Pages, and delivered the site in 1 month and continue to work on it.

Technologies and tools: Astro, TypeScript, HTML5, CSS3, Figma, Opendcode, Git, GitHub Pages.

Development of a Research Data ETL at the Federal Institute of Espírito Santo (IFES).

- Assisted in data correction and anonymization, as well as in the development of tests.
- Maintained the data evolution and exposure repositories.
- Optimized an ETL pipeline by applying parallelism in Python, reducing execution time and RAM consumption by 50%.

Technologies and tools: Astro, TypeScript, HTML5, CSS3, JavaScript, Prefect, Pytest, Opencode, Git, GitHub Pages.

Academic Background

(January 2023 - Ongoing) Bachelor's degree in Information Systems, Instituto Federal do Espírito Santo (IFES), Serra, Brazil.
